Project Proposal

Name of the Project: Mesajla

The URL of the project web page: https://skt1803.github.io/mesajla/

Names of the team members:

- ❖ Ahmet Tunahan Küçükgökce
- ❖ Altar Gürsoy
- ❖ Burak Eren Birinci
- ❖ Serdar Kemal Topkaya

Names of the supervisor and jury members:

- ❖ Eren Ulu (supervisor)

1-2 paragraph description of the Project:

The Real Time Chatting Application provides a new feature where you can not only type your own response, but also choose an answer that generated by AI. When a person sends you a message, the application analyzes its content and creates an AI generated responses according to the context and the flow of the conversation. Then you can select one of the responses or write your own response.

This makes chatting faster, and more importantly much more fun providing creative ways to respond for our users. This way you can respond to messages without having to think about the response while AI does the thinking for you.
